Ayoub Chraiti

Casablanca, Morocco | +212 614060052 | ayoubchraiti2@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Fresh graduate (2026) in Computer Science and Digital Technologies with hands-on Java/Spring Boot and full-stack development experience. Completed a software engineering internship at Oracle, improving deployment workflows and building AI-assisted diagnostics. Combines backend engineering and API integration with React, cloud infrastructure, and practical LLM tools.

Experience

Oracle Morocco R&D Center Feb 2026 - Jul 2026
Software Engineering Intern *Casablanca, Morocco*

- Reduced the runtime of an internal service deployment workflow by **30%** by identifying independently deployable service groups and parallelizing a previously sequential 24-hour process.
- Co-designed a zero-downtime blue/green rollout strategy with 3 senior engineers and presented it to a 15-person infrastructure organization, which adopted it as the default deployment pattern.
- Developed and validated **Terraform** automation for **OCI** deployments, making infrastructure provisioning more repeatable and reliable.
- Built an AI-assisted tool to analyze application and deployment logs, identify failure signals, and generate diagnostic summaries for infrastructure engineers.

Technical Skills

Backend and APIs	:	Java, Spring Boot, REST APIs, FastAPI, Node.js, Express
Architecture	:	Microservices, distributed systems, concurrency, API design, OOP
Frontend	:	React, TypeScript, JavaScript
Data and Scripting	:	PostgreSQL, Redis, SQLite, SQL, Python
Cloud and DevOps	:	Oracle Cloud Infrastructure (OCI), Terraform, Docker, Docker Compose, Kubernetes, CI/CD
AI and Tooling	:	LLM APIs, Claude API, prompt and tool integration, AI-assisted development
Languages Spoken	:	French, Arabic (Darija), English

Education

University Mohammed VI Polytechnic - 1337 School 2023 - 2026
Computer Science and Digital Technologies - RNCP Level 7 (Master's equivalent)

Projects

HyperTube (Streaming Service)
Java, Spring Boot, React, PostgreSQL, Redis, OAuth2

- Built a Java/Spring Boot streaming backend with FFmpeg HLS transcoding, allowing users to watch videos before downloads finish.
- Separated media processing from API request handling so streaming and transcoding run concurrently without blocking user requests.
- Enriched **10,000+ titles** with metadata and multilingual subtitles by integrating TMDb and OpenSubtitles APIs.

Matcha (Dating Platform)
React, Express.js, PostgreSQL, WebSockets

- Built user profiles and tag- and location-based discovery with optimized PostgreSQL queries.
- Implemented real-time chat and interaction notifications over WebSockets.
- Protected the platform against spam and brute-force attempts with session authentication, input sanitization, rate limiting, and WebSocket connection throttling.

LogLens (AI-Powered Log Analyzer)
React, TypeScript, Claude API

- Integrated the Claude API to turn application and deployment logs into structured diagnostic summaries, helping engineers investigate failures.
- Built real-time log ingestion, filtering, and visualization to support AI-assisted root-cause analysis.

Certifications

HackerRank - Software Engineer Certification | **CodinGame** - Java and Python Certifications
